Overview

Highlights in this issue

- This issue of the *Australian forest and wood products statistics* (AFWPS) incorporates new data relating to plantation areas, log harvest volumes and values and estimates of sawnwood and paper production for 2007-08. Updated Australian Bureau of Statistics (ABS) trade data for the September and December 2008 quarters are also included.
- The total volume of logs harvested in 2007-08 rose by 4.7 per cent to 28.5 million cubic metres. While the volume of logs harvested from native forests has declined by 13 per cent compared with 2002-03, they recorded a slight increase in 2007-08 to about 8.9 million cubic metres (figure a).
- Continuing the trend of recent years, the volume of logs harvested from plantations in Australia increased significantly in 2007-08, particularly broadleaved plantation logs, which increased by 14 per cent to 4.6 million cubic metres. Pulplogs for woodchip export was 89 per cent of the volume of plantation logs harvested.
- The timber plantation area in Australia continued to expand in 2008, reaching almost 2 million hectares in June, with more than 1 million hectares of coniferous plantations and 950 000 hectares of broadleaved plantations.
- However, the rate of establishment of new plantations eased in 2008. While more than 72 000 hectares of timber plantations were established over the year to June 2008, this is 16.5 per cent lower than the 87 000 hectares of new plantations established in the previous 12 months. In 2008, more than 90 per cent of the new plantation area was broadleaved plantations.

a Australian log removals

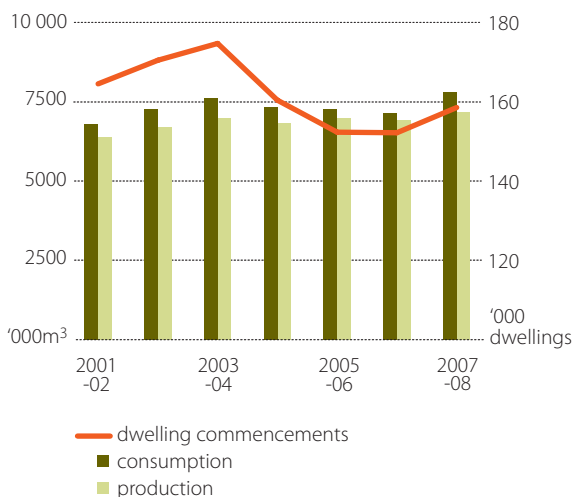

Production and consumption

- Total Australian sawnwood production was estimated at 5.4 million cubic metres in 2007-08, representing a 4 per cent rise on the previous year. While the production of hardwood sawnwood declined over the year, coniferous sawnwood production increased by 8.5 per cent.
- Paper and paperboard production also increased in 2007-08, by 2.8 per cent to reach 3.3 million tonnes. This was because of a strong rise in newsprint production, which rose by 11 per cent.
- While the production of wood-based panels also increased in 2007-08, more recent quarterly data suggests a decline in the sector. In the September and December 2008

quarters, wood-based panel production was down by 1.8 per cent compared with a year earlier, led by a 4.2 per cent fall in medium density fibreboard output.

- Domestic demand conditions for Australia’s forest products, which have been weak for several years, picked up in 2007-08 as a result of GDP growth of 3.7 per cent and robust housing activity which saw dwelling commencements increase by 4.2 per cent over the year.
- Consequently, apparent consumption of sawnwood increased by almost 9 per cent in 2007-08, as a result of a 12 per cent rise in coniferous sawnwood consumption (figure b). As well as higher domestic sawnwood production, the higher level of consumption was supplied by a large increase in coniferous sawnwood imports, particularly from Austria.

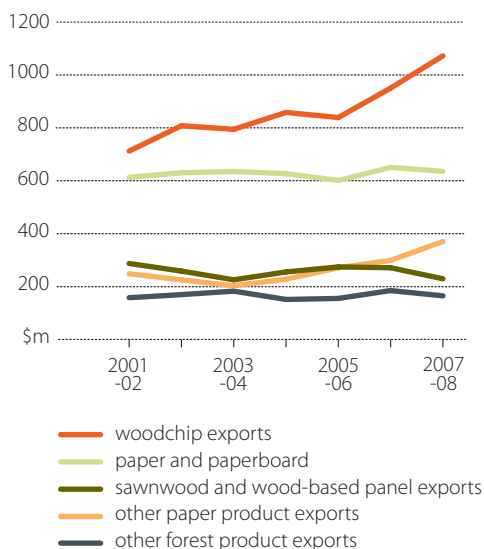

b Australia’s sawnwood and wood-based panel consumption and production

Trade

- Overall, imports of forest products increased by 3.3 per cent in 2007-08 to \$4.4 billion. Import growth was led by sawnwood, packaging and industrial paper, and paper manufactures. In the September and December quarters of 2008, imports of forest products recorded a strong rise, up by 11 per cent on the same period in 2007. The largest rises were imports of printing and writing paper and miscellaneous forest products, while the value of sawnwood imports fell slightly.
- The total value of forest exports also increased strongly in 2007-08, by 5 per cent to reach \$2.5 billion. This growth reflected a strong increase in exports of woodchips and recovered paper over the year (figure c). The value of woodchip exports increased by 13 per cent in 2007-08 to reach more

c Forest sector exports

than \$1 billion for the first time, while the value of recovered paper exports increased by 44 per cent to \$252 million.

- Against this trend, forest product exports were down in several sectors. For instance, the trend of sawnwood and wood-based panels export growth in recent years reversed sharply in 2007-08, with the value of exports down by 17 per cent over the year. Wood-based panel exports were down 13 per cent in 2007-08, while paper and paperboard exports declined by 2 per cent.
- Woodchip export prices remained strong in 2007-08, with broadleaved unit values up by 8 per cent to an average of \$176 per bone dry tonne and coniferous prices up by 14 per cent to \$165 per bone dry tonne. Woodchip export prices were also higher in the September and December quarters of 2008, up by 13 per cent for broadleaved woodchips and 25 per cent for coniferous woodchips. This led to an increase in the aggregate value of woodchip exports in these quarters, despite a decline in volume.
- The volume of broadleaved woodchip exports in Western Australia rose strongly in the September and December quarters 2008, reflecting increased harvests from broadleaved plantations. This was partly offset by falls in broadleaved woodchip export volumes from Tasmania and New South Wales.
- While broadleaved woodchip exports to the principal market of Japan rose slightly, the volume of exports to China and Chinese Taipei declined in the September and December quarters 2008, while exports to the Republic of Korea more than doubled.

Methodology

The statistics reported in this publication are derived from a variety of sources. A list of the data sources and assumptions is provided in the footnotes of each table.

In general, all data in the publication relating to imports and exports have been compiled from information published monthly by the Australian Bureau of Statistics (ABS) in *International Trade*, electronic data service (cat. no. 5464.0), which is supplemented with data sourced from industry organisations when available. Median monthly trade unit values have been used from January 2002 wherever the monthly unit value has fallen below the median value by 25 per cent.

Production data are sourced from the various state forest services and industry organisations, with some estimates derived from ABARE datasets.

Care should be taken when using Australian export statistics by commodity and destination, owing to data quality issues associated with volumes and unit values in disaggregated data.

All data are subject to revision.

A number of changes have been made to the presentation and content of recent editions of AFWPS, based on feedback received from users of the publication and the associated datasets. ABARE is interested in the ongoing development of AFWPS to ensure that data continues to be relevant and useful to users.

If you have any comments regarding the data or issues presented in this publication, please contact Kevin Burns on (02) 6272 2253 or email kevin.burns@abare.gov.au.

Forest product production and consumption estimates

The data relating to sawnwood production in 2007-08 (tables 11 and 12) is derived from ABARE's 2007 sawmill survey and ABARE estimates of national sawnwood consumption and state-based log removals. A full copy of the 2007 Sawmill survey report can be obtained from ABARE's website.

Other forest product production data provided in table 11 is obtained from national industry associations.

Apparent consumption of forest products (table 10) is derived data and calculated as production less exports plus imports.

Log removals from Australia's forests

Each year ABARE collects log removal and price data from a range of forest growers and major log purchasers as part of the survey of gross value of log production. These sources include crown native and plantation forest data from state forest agencies and data from major plantation companies. However, with the exception of Tasmania, there are no state-based central collection points for private native forest data.

Consequently, estimates of removals from this resource have relied on partial surveys of major processors which are known to purchase from private forest managers, and general estimates from forest industry experts.

This edition of the AFWPS contains some revisions to historical estimates of forest harvest volumes, based on ongoing data checking and discussions with some state forest agencies. In addition, removals of firewood for industrial and domestic purposes are not included in total removals because of inconsistencies in the definition and reporting of this log category across states.

National forest and plantation inventories

Information on forest areas by forest type and tenure class and information on plantation areas and plantings were provided by the National Forest Inventory and National Plantation Inventory.

Further information about forest and plantation data can be obtained by contacting:

Email: nfi.info@brs.gov.au

Definitions

Values presented in trade tables are 'value for duty' for imports and 'free on board' (fob) from Australian ports for exports.

Apparent consumption is defined as production plus imports minus exports. Excludes any allowances for change in inventory or interstate transfers.

Small discrepancies in totals are generally caused by rounding.

The National Forestry Inventory uses the following definitions for tree height:

- **low:** 2 to 10 metres
 - **medium:** 11 to 30 metres
 - **tall:** greater than 30 metres
- and the following terminology for forest area:
- **closed forest** refers to areas with trees more than 2 metres tall and with a canopy cover greater than 80 per cent
 - **open forest** refers to areas with trees more than 2 metres tall and with a canopy cover between 50 and 80 per cent
 - **woodland** refers to areas with trees more than 2 metres tall and with a canopy cover of between 20 and 50 per cent.

Abbreviations and symbols

bdt	bone dry tonnes
bdu	bone dry units (1.0886 tonnes)
t	tonne (1000 kg)
kt	kilotonne (1000 tonnes)

^a The increasing availability of high-resolution, remote sensing data and better methods for determining forest continue to improve estimates of Australia's forest cover. This largely explains the change in estimated total forest area from 164 million hectares in 2003 to 149 million hectares reported here; little of the change is because of real forest loss. For a full explanation see *Australia's State of the Forests Report 2008* (Montreal Process Implementation Group for Australia). ^b As at June 2008.

a The decrease in plantation area in 2005 is mainly associated with more accurate measurement of existing plantation area rather than a reduction in land area used for plantations. **b** The reduction in plantation area in 2003 is because of wildfire. **c** Includes fallow land not replanted since the 2003 wildfire. **d** Total includes plantations where type is unknown.

a Sales and service income is defined as follows: sales of goods whether or not manufactured by the business. They are exclusive of goods and services tax (GST). See ABS publication Explanatory Notes for full details. **b** 2006-07 data is the first release of estimates using the 2006 edition of ANZSIC. Because of the combined effect of this new classification and methodological changes, new series have commenced with the 2006-07 data and are not directly comparable with previous years. See ABS publication Explanatory Notes for full details. **c** Estimate has a relative standard error of 10% to less than 25% and should be used with caution. **d** Not available but estimate included in totals. **e** Data collected for 2004-05 and 2005-06 (under ANZSIC93) has been mapped to ANZSIC06 and methodological changes applied to provide 'bridging' series for key totals only. **f** Based on ANZSIC06.

a Labour force annual employment data is the average of the quarterly survey data. **b** Includes forestry support services. **c** Manufacturing industry employment data is based on end of June data. **d** Data series based on ANZSIC 1993 industry groups which ceased in 2005-06. **e** Not available but included in totals. **f** 2006-07 data is the first release of estimates using the 2006 edition of ANZSIC. Because of the combined effect of this new classification and methodological changes, new series have commenced with the 2006-07 data and are not directly comparable with previous year. See ABS publication Explanatory Notes for full details. **g** 2006-07 is latest available data. **h** Estimate has a relative standard error of 10% to less than 25% and should be used with caution. **i** Not available but estimate included in totals. **j** Data collected for 2004-05 and 2005-06 (under ANZSIC93) have then been mapped to ANZSIC06 and methodological changes applied to provide 'bridging' series for key totals only.

Utilisation rate a	%	54.0	54.0	63.1	63.5	61.0
Recovery rate b	%	50.5	56.6	70.6	73.6	75.6

a The utilisation rate measures the relationship between the volume of recovered paper used in domestic production and the total volume of domestic paper production, expressed as a percentile. **b** The recovery rate measures the relationship between the total volume of recovered paper collected relative to the volume of raw paper and paperboard consumption, expressed as a percentile. Consumption of paper and paperboard is calculated from the production and trade in raw paper and paperboard and excludes the volume of imports and exports of paper and paperboard in the form of packaging and printed material (traded books and other printed material) which is not available.

a Pulpwood logs are included in the table exports of roundwood. **b** Broadleaved woodchip volumes were confidential from February 2000 to May 2000. From 1 June 2000 to April 2005, ABS have applied selected country and state confidentiality restrictions. From February 2003 to April 2005 all state details are confidential. All selected country and state confidentiality restrictions for broadleaved woodchip exports ceased in April 2005. **c** Bone dry tonnes.
